# Intimus POS

Intimus POS is a solution based on latest technologies and incorporates best Food Service Industry practices from around the world. It allows the user to create and print KOTs at remote locations, generate checks and settle. Intimus POS can seamlessly integrate with core modules such as Financials and Materials management, giving a complete solution to all your needs.

Main features of Intimus POS are as follows:

- Caters to Fine Dining, Takeaway and Deliveries.

- Ability to login using a swipe card.

- User Defined pictures on the menu buttons.

- Automatic splitting of an order into multiple KOTs depending on the location from which it is served.

- Generation of separate checks based on item categories or seat numbers.

- Linking of orders to a guest database for all – Dine-in, Takeaway and Deliveries.

- Generation of Guest History reports.

- Ability to issue and accept Loyalty Cards, pre-paid cards.

- Automatic switching to different menu pricing for items based on time range (Happy Hour)

- For delivery, automatic pop up of customer details based on telephone number, ability to link maps to customer locations, driver allocation, delivery information update.

- Multiple types of settlements including Cash, Cards, Credit etc. Settle checks in multiple currencies.
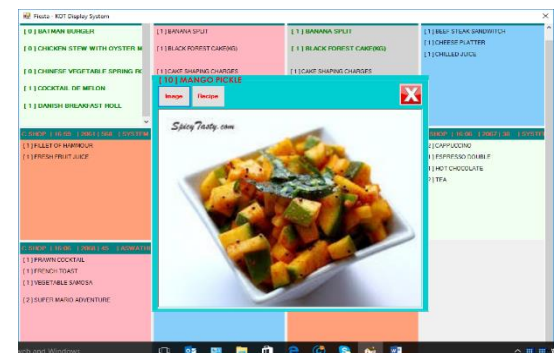

Fine Dining Restaurants

- Define restaurant lay-out with pictorial representation.

- Tables colour codes to display status – Occupied, Vacant, Dirty, No Service

- Orders can be taken directly against the table, checks can be prepared and settled.

- Switching between the classic view (standard POS) and Table Layout view.

Kitchen Display System

- Display orders in the kitchen as they are ordered.

- Chef can select a KOT and see the order details.

- Orders can be marked as Ready to Serve, Delivered, Cancelled, Delayed, Under Preparation etc.

- Chef can see the image of the Standard Presentation while serving the order to ensure compliance.

Integration with Handheld devices

- You can now use any standard smart phone or tablets as a handheld device for order taking.

- Accept and print orders directly to the Kitchen.

- Browser-based: Runs on any operating system

- "Order Ready" notifications are received on the device if integrated with Kitchen Display System

Table Reservations

- Accept reservations from customers

- Assign tables to reservations

- Accept orders against reservation and convert the order to a KOT upon arrival of the guests.

- Multiple table assignment for large groups

- Multiple slots against each table

Caller Recognition

Intimus POS integrates with caller ID devices so that caller information can be flashed on the screen when a repeat customer calls for ordering

- Caller information containing name, address and ordering history, appears while accepting the call
- New caller information can be saved to the system whilst accepting an order

Menu Engineering

- Create detailed Recipes for F & B menus
- Recipes can also be created for semi-prepared items such as sauces, gravies etc.

F & B Cost Control

- Generate theoretical consumption report based on outlet sales and recipes and account for variations
- Maintain par stock at locations to enable physical stock taking and reordering

Multi-location POS Operations

Intimus POS supports multi-location POS operations and provides the following facilities

- Consolidation of POS data from all locations to a central location
- Central Purchasing
- Central Warehousing
- Central Kitchen
- Financial Consolidation
- Real time Dashboards giving operational information from any location
- Allow offline operations and synchronize when data connection is available
